QUICK MOVE Standing Frame

With Adjustable Base

TQM 2000

The Quick Move is an ideal transfer/transport device for patients that require minimal assistance. Patients simply step onto the foot plate and elevate into a standing position either on their own or with some care giver assistance. The seat pads are then quickly swivelled into place so that the patient can be comfortably seated. The patient can then be easily moved to the desired location. The Quick Move is perfect for post-op patients that require early ambulation but may be unsteady due to lingering anaesthetic, medication, or pain.

KEY FEATURES:

- ✓ **High weight capacity** of 375 lbs.
- ✓ **Adjustable base** allows for integration with most chairs and wheelchairs.
- ✓ **Adjustable seat angle** for maximum patient comfort.
- ✓ **Adjustable knee pad** accommodates virtually all patients.
- ✓ **Easy roll casters** for superior rollability and maneuverability.
- ✓ **Compact**, space saving design.
- ✓ **Optional harness** for additional convenience and safety.
