CIRRUS

ELECTRIC CEILING LIFT

THE INDUSTRY STANDARD FOR SAFETY & COMFORT

The new Cirrus Electric Ceiling Lift raises ceiling lift functionality and usability to a new level. The compact design and modern styling of the Cirrus allows it to blend in with any décor. Small and sleek, however, doesn't mean weak; this lift can safely handle up to 600lbs. Designed specifically for the institutional market, the Cirrus features a high output lifting motor and an all-metal drive train for superior safety and durability. Our signature, true 6-point spreader bar means maximum comfort and safety for your patients. It also allows the lift to be used for effective in-bed repositioning- a task that old style, 2-point spreader bars just can't effectively perform. Available in both manual and power traverse models, the Cirrus is packed with an extensive array of safety and ease-of-use features.

One critically important factor to consider when selecting the appropriate ceiling lift for your facility is how well the lift and tracking will work within your existing environment. Often overlooked is the integration of the ceiling lift tracks with the existing privacy curtain system. Our industry exclusive, patent pending Curtain Track Pass Through option provides the industry's only solution. It allows your existing privacy curtains and privacy curtain tracks to work seamlessly with the ceiling lift tracks. Competitive vendors will require that you cut curtains and curtain tracks or install a cumbersome wall mounted curtain system (both expensive and time consuming modifications). The Curtain Track Pass Through Solution allows you to avoid all modifications and permits you to maintain the clean, efficient and effective privacy curtain system you have now.

The Cirrus Electric Ceiling Lift is guaranteed to reduce your workplace injuries and increase patient safety. In addition, it's the only ceiling lift that can be seamlessly integrated into your environment for the best in convenience, appearance and patient privacy.

Super 6-Point Spreader Bar

INCLUDES:

- pivoting, permanently attached side bars
- sling safety locks
- padded spreader bar
- maximizes patient comfort and safety and allows for in-bed repositioning

Easy To Use

- all functions are clearly marked on the main control panel
- includes visual battery indicator and an extra set of controls

Save Space, Reduce Injuries

- the cirrus requires zero floor space and is always ready to use
- smart sleep mode ensures lift is always charged

Effortless Floor Lifts

- the extra long lifting strap allows for easy floor lifts in virtually any environment

In Bed Reposition

- only a true six point spreader bar allows for effective in-bed repositioning

ADDITIONAL FEATURES AND OPTIONS

DIGITAL WEIGH SCALE

The optional digital weigh scale allows for accurate patient weighing in lbs. and kgs.

CURTAIN TRACK PASS THROUGH SOLUTION

Only T.H.E. Medical can provide ceiling lift users with this innovative solution. A patent-pending trolley and track design allows your existing privacy curtain tracks to work seamlessly with ceiling lift tracks. No modifications are required and best of all, privacy curtains work the same way they always have. The advantage of this feature is two-fold: Installs are significantly less expensive and quicker, plus, privacy curtains are left in-tact. Privacy is maintained and caregivers enjoy hassle-free curtain handling.
